MAURICIO DAVALOS

QA Automation Engineer | SDET

PROFILE

I started in QA automation with Java and JUnit at Jalasoft, running nightly regressions and maintaining Cucumber BDD frameworks for SaaS clients. Over the past year I transitioned into Playwright + TypeScript, building E2E suites and GitHub Actions CI/CD pipelines from scratch for two production apps — using AI tools like Claude Code throughout to move faster and learn deeper. I believe knowing how to work with AI is now part of the job, and I lean into it.

SKILLS

Test Automation

- Playwright (E2E, headless, Chromium)
- Selenium WebDriver, Appium
- REST Assured, Postman (API testing)

Frameworks & Languages

- TypeScript / JavaScript
- Java
- Cucumber.js – BDD (TypeScript)
- JUnit, TestNG, Cucumber (Java)

CI/CD & Reporting

- GitHub Actions (pipeline ownership)
- Jenkins (nightly regression, config)
- Allure Reports, HTML Email CI reports
- Docker, SonarQube, DockerHub
- Git, GitHub · Jira Scrum/Agile
- VS Code, IntelliJ IDEA

AI Tools

- Claude Code (daily use)
- GitHub Copilot

Full-Stack (Personal Projects)

- React, TypeScript, Vite, Tailwind CSS
- Supabase (PostgreSQL + Auth + RLS)
- Vercel deployment

EDUCATION

Certified Software Automation Testing Professional (AT)
Jala Foundation · 2022

Bachelor's, Mechatronics Engineering
Universidad Católica Boliviana (UCB) · 2022

Advanced Technician, English Studies
Centro Boliviano Americano (CBA) · 2015

WORK EXPERIENCE

Automation Engineer – Jalasoft (Contractor)
2022 – 2025 · ERP & CRM / Procurement SaaS Platform
Frameworks: JUnit, Cucumber – Java | Project Management: Jira (Scrum)

- Automated UI and API test cases for an ERP/CRM app migrated from desktop to web, using JUnit and Cucumber (Java) with BDD patterns.
- Owned nightly regression execution in Jenkins; identified and triaged test failures, distinguishing flaky from real defects, and updated Jenkins plan configurations.
- Maintained and extended a Cucumber+JUnit framework for a Procurement SaaS platform, cross-validating Postgres vs DB2 regression results and surfacing database discrepancies.
- Collaborated cross-functionally: briefed the QA team on application changes and reported issues directly to the dev team, reducing regression-to-fix cycle time.
- Delivered daily regression reports and gave internal presentations on automation best practices.

Software Test Automation Scholar – Jala Foundation
2022 · WordPress application & Online Store

- Built an API + GUI automation framework from scratch using Cucumber (BDD), TestNG, REST Assured, Log4j and Postman.
- Deployed an online store project to DockerHub with SonarQube quality gates.

PERSONAL PROJECTS (PORTFOLIO)

Bastille Hotel — Full-Stack System & Playwright E2E Suite
React · TypeScript · Supabase · Playwright · Cucumber.js · GitHub Actions

- Built a production hotel management web app (React + TypeScript + Vite + Tailwind) backed by Supabase (PostgreSQL with RLS policies) and deployed to Vercel.
- Authored a complete BDD E2E test suite in Playwright + Cucumber.js (TypeScript) covering smoke, E2E and regression profiles with Allure reporting.
- Designed a GitHub Actions CI/CD pipeline (push + nightly cron) running smoke → E2E jobs with flaky-test retry, Allure artifact upload, and automated HTML email delivery after every run.
- Implemented AI-assisted test authoring with Claude Code to accelerate step-definition generation and framework scaffolding.

Cretassic Hostal — Full-Stack System & Playwright E2E Suite
React · TypeScript · Supabase · Playwright · Cucumber.js · GitHub Actions

- Independently designed and deployed a second hostal management system with the same production-grade stack, demonstrating reusable framework architecture.
- Mirrored the CI/CD pipeline (staggered nightly schedule 02:30 UTC) with identical smoke → E2E flow and email reporting to a shared monitoring inbox.
- Both projects publicly available on GitHub, showcasing end-to-end ownership from database schema to CI pipeline.
